

REQUEST FOR TEXTILE AND APPAREL SAFEGUARD
ACTIONS ON IMPORTS FROM CHINA

SYNTHETIC FILAMENT FABRIC (CATEGORY 620) IMPORTED FROM
THE PEOPLE'S REPUBLIC OF CHINA

filed November 8, 2004

Authority for Action: Section 204 of the Agriculture Act of 1956, as amended, and § 11.242 of the Report of the Working Party on the Accession of China to the World Trade Organization.

Subject of Petition: Imports of synthetic filament fabric from China, classified as Category 620 by the U.S. Textile and Apparel Category System.

A. INTRODUCTION

This Petition is filed requesting action under the authority of § 204 of the Agriculture Act of 1956, as amended, and § 11.242 of the Report of the Working Party on the Accession of China to the World Trade Organization with respect to imports of synthetic filament fabric (classified in the U.S. Textile and Apparel Category System as Category 620, the “subject products”) of Chinese origin. The Committee for the Implementation of Textile Agreements (CITA) is hereby requested to take all appropriate steps in order to avoid market disruption in 2005 with respect to imports from China of such products. Petitioners submit that such market disruption can only be avoided by the timely imposition of limitations on imports of the subject products from China according to the provisions of Section 11.242 of the Report of the Working Party and the guidelines issued by the Committee for the Implementation of Textile Agreements (68 F.R. 27788, May 21, 2003).

Upon the lifting of quotas on January 1, 2005, the U.S. market will experience an increase in imports of the subject products from all sources. These increasing imports threaten the U.S. with market disruption, and imports of the subject products from China will play a role in that increase and in the threat of market disruption. Imports of the subject products have increased in 2004 and will increase in 2005.

This petition establishes:

- ◆ That imports will increase in 2005 as a result of the lifting of quotas;
- ◆ That imports from China will play a role in that increase;
- ◆ That the increase in imports will contribute to a decline in U.S. production of the subject products and a decline in U.S. market share;
- ◆ That the U.S. market for the subject products will be disrupted in January and throughout 2005 by increasing imports of the subject products; and
- ◆ That imports of the subject products from China play a role in the threatened market disruption to the U.S. market.

By demonstrating the threat of market disruption and the role of imports from China in that disruption, Petitioners have established sufficient grounds for action to be taken under section 11.242 of the Report of the Working Party. The imminent threat of substantial increases in imports of the subject products from China and of market disruption will impede the orderly development of trade in the subject products.

This Petition is filed on behalf of organizations¹, which represent U.S. manufacturers and workers involved in the production of the subject products. Some of these organizations’ members produce products like or directly competitive with the subject products.

B. SUMMARY OF THE CASE

This petition proves that total imports of the subject products into the United States will rise upon the expiration of quotas on January 1, 2005. Imports from the People's Republic of China will play a role in the rise of overall imports in the subject category, category 620. As a result of

¹ A description of each organization and its membership is included in section C of this report and in Exhibit 1.

these rising imports, U.S. production of the subject products will decrease. Consequently, the percentage of U.S. market share held by domestic producers will also decline and there will be disruption to the U.S. market.

It is evident that imports of the subject products into the United States will increase because 1) imports of the subject products are currently increasing; 2) the removal of import quotas on January 1 will provide greater opportunity for imports to increase; 3) in all other textile or apparel categories where quotas were removed in January 2002, imports have increased; and 4) the price of imports typically falls after import quotas are removed, making them more attractive in the U.S. market.

Imports of the subject products into the United States are currently rising in an overall contracting market and are up 10 percent year-to-date 2004. Imports of the subject products will increase when import limitations are removed on January 1, 2005. Increasing imports of the subject products threaten to disrupt the U.S. market and impede the orderly development of trade in the subject products. U.S. production of the subject products has declined by 67 percent since 2001.²

In this regard, the petition provides evidence that China is well positioned to play a role in the increase of imports from the world into the United States in the subject category. China is already a major producer and exporter of the products in question. The subject category is contained in a group limit with respect to imports from China.³ China has used the room within this group limit to substantially increase its exports of these fabrics to the U.S. in recent years. U.S. imports from China in the subject category climbed 26.7 percent from 2001 through the year ending August 2004. This increase accelerated during the first eight months of 2004 to 46.4 percent over the same period last year.⁴ Increased imports from China will have an even more damaging and disruptive impact if the current contracting environment in the overall U.S. market continues.

The petition demonstrates that China is increasing its textile and apparel production capacity at unprecedented rates. Chinese government statistics reveal that China has invested \$22.2 billion in its textile and apparel operations over the past three years.

China's ability to penetrate and capture world markets is substantially aided by the existence of numerous unfair trading practices. For example, China's ability to undercut the prices of its competitors, including U.S. producers, is a direct result of its resort to unfair trade practices, such as the manipulation of its currency, direct state subsidization, export tax rebates and the proliferation of non-performing loans - many of which are in the textile and apparel sectors. All of these practices have enabled China to undermine free market conditions and give it substantial capability to disrupt world markets, including the United States.

China's ability to disrupt the U.S. market is clearly evident from recent quota removal experience. In two fabric categories that were removed from group quota coverage in 2002, U.S. imports from China grew rapidly to unprecedented levels of trade.

² The percentage decrease is based off of calendar year 2001 compared with the year ending September 2003, the most recent 12-month period for which production data is available.

³ Since there is no specific quota limit for category 620, it is controlled as a part of Group III.

⁴ Major Shippers Report by Category, 8/2004 data, issued by the Office of Textiles and Apparel, International Trade Administration, U.S. Department of Commerce.

Further reinforcing the threat of disruption is the fact that the financial condition of the U.S. industry producing the subject products has worsened, with recent declines in virtually every measure of financial health, including declines in sales, volume, production, employment, and capacity utilization.

Virtually every independent study or report that has considered the quota removal issue has come to the same conclusion - China textile and apparel exports to the U.S. will accelerate dramatically after quotas are lifted.

Historical trends, current levels of import, price considerations, recent history in other textile and apparel categories where quotas were lifted, examples from other markets where quotas were lifted, productive capacity, retail business operations and voluminous studies by experts and market participants demonstrate conclusively that imports of the subject products from China will surge after quotas are lifted.

Implementation of appropriate limitations in January 2005 as provided for in paragraph 11.242 of the Working Party Report is the only avenue by which CITA can avoid market disruption and the disruption of the orderly development of trade due to imminent increases in imports from China and the world.

C. PETITIONERS

Petitioners are trade associations and unions which are representative domestic producers of products that are like or directly competitive with the subject products.

This Petition is filed on behalf of the following organizations⁵ which represent U.S. manufacturers of synthetic filament fabric:

The National Council of Textile
Organizations (NCTO)

The American Manufacturing Trade Action
Coalition (AMTAC)

The National Textile Association (NTA)

UNITE HERE!

D. PRODUCT DESCRIPTION

This Petition is brought with respect to U.S. imports of synthetic filament fabric of Chinese origin and includes all such products classified within category 620 of the U.S. Textile and Apparel Category System. Category 620 primarily covers filament yarn fabric of the weight class greater or equal to 170 grams per square meter but does include some fabrics that weigh less or equal to 170 grams per square meter, including unbleached or bleached, dyed, yarns of different color, and printed. This includes woven fabric of high tenacity yarn, textured polyester yarn, non-textured polyester yarn, and nylon yarn. Examples of key fabrics contained under this category of interest to the U.S. industry are: all types of fabrics of 85 percent or more by weight of polyester filament yarns weighing more than 170 g/m² (both textured and non-textured); all types of fabrics of less than 85 percent by weight of polyester filament yarns weighing more than 170 g/m² (both textured and non-textured); all types of fabrics of high tenacity yarns; and all types of fabrics of 85 percent or more by weight of synthetic filament yarns other than polyester.

⁵ A description of each organization and its membership is included in Exhibit 1.

The subheadings of the Harmonized Tariff Schedule of the United States applicable to category 620 are set out in Exhibit 2.

Imports classified in category 620 were covered by the WTO Agreement on Textiles and Clothing as of the date the WTO Agreement entered into force and are under quota restraints until January 1, 2005. The U.S. quota on imports of the subject products from China is monitored in a larger group, "Group III." The Group III quota for 2004 is about 76 million SMEs. Data from OTEXA⁶ indicates that China has filled 56.7 percent of its Group III 2004 quota as of November 4th.

Imports of the subject products compete directly with products produced in the U.S. market that are classified as category 620.

E. IMPORT DATA

As required by the guidelines issued by CITA, this section provides import data concerning the subject products from all sources and specifically from China.

With respect to total imports, imports of the subject products are increasing in the most recent year ending and year-to-date periods. The data shows a 5 percent increase in the subject products for the year ending August 2004 and a 10 percent increase for year-to-date 2004.

This increase coincides with the fact that imports of textiles and apparel into the United States have consistently increased over the last 10 years. In addition, the strong likelihood that imports of the subject products will continue to increase in 2005 is demonstrated by the fact that following quota removals in 2002, imports of fabric, as well as other products, increased significantly.

Chart 1 - US Total Textile and Apparel Imports

In the 44 textile and apparel categories removed from quota control, imports from the world rose by an average 19 percent during the twelve months following the removal of quotas. Large increases occurred in each kind of textile product, with yarn imports increasing by 12 percent,

⁶ Office of Textiles and Apparel, International Trade Administration, U.S. Department of Commerce.

fabric imports increasing by 22 percent, made-up articles increasing by 16 percent and apparel products increasing by 12 percent.

Increases in Imports During the 12 Months Following Quota Removal		
	Increase in Square Meters (2002-2001)	Percentage
All textiles	1,244,685,214	17%
- Yarn	155,284,502	12%
- Fabric	641,673,905	22%
- Made-ups	447,726,808	16%
Apparel	129,203,805	12%

Increases in imports in de-controlled categories continued into 2002, 2003 and 2004. As of year-ending August 2004, the following increases in imports from the world had occurred:

Increases in Imports Since Quotas Were Removed		
	Increase in Square Meters (YE 2004-2001)	Percentage
All textiles	3,817,716,392	54%
- Yarn	243,056,375	19%
- Fabric	1,652,493,106	56%
- Made-ups	745,506,327	71%
Apparel	1,922,166,910	67%

Regarding China specifically, imports of category 620 from China are restrained under a larger group quota, Group III. The quota for Group III is approximately 76 million SMEs. China has filled almost 60 percent of its quota for these merged categories as of November 4, 2004.

According to OTEXA trade statistics for year-to-date August, imports from China of category 620 products are running at over 6.8 million square meters per year. Imports from China of category 620 on a year-to-date basis for 2004 are up by 46.4 percent, well above the pace they set in 2003.

China is expected to further expand its already increasing exports of category 620 products to the United States once quotas are removed. In textile categories where quotas have already been removed, China played by far the dominant role in both the immediate increase during the first year and in enormous increases during the following years.

In two fabric categories that were removed from group quota coverage in 2002, U.S. imports from China grew rapidly to unprecedented levels of trade. In category 222, knit fabric, U.S.

imports from China in the year ending August 2004 amounted to 11.5 million kilograms, an increase of 35,838 percent over 2001 when imports from China were less than 32,000 kilograms. In category 622, glass fiber fabric, U.S. imports from China in the year ending August 2004 totaled 12.5 million square meters for a 862 percent increase from the 1.3 million square meters imported in 2001.

Imports of all textile and apparel categories from China in de-controlled categories increased by 185 percent during the first 12 months following quota removal, with imports of yarn increasing by 1,425 percent, fabric by 310 percent, and made-ups by 155 percent. Overall, imports from China of textile products increased by 165 percent during 2002. Imports of apparel products increased by 279 percent during the same time period.

Increases in Imports From China During the 12 months Following Quota Removal		
	Increase in Square Meters (2002-2001)	Percentage
All textiles	793,477,911	165%
- Yarn	13,068,613	1,425%
- Fabric	69,623,244	310%
- Made-ups	710,786,054	155%
Apparel	292,105,642	279%

Again, China continued to dramatically increase its exports into 2002, 2003 and 2004. As of year-ending August 2004, the following increases in imports from China had occurred:

Increases from China Since Quotas Were Removed		
	Increase in Square meters (YE 2004-2001)	Percentage
All textiles	3,817,716,392	581%
- Yarn	243,056,375	1,062%
- Fabric	1,652,493,106	1,400%
- Made-ups	745,506,327	540%
Apparel	1,922,166,910	1,061%

As the tables above illustrate, China will undoubtedly play a significant role in the overall increase in imports of the subject products. As discussed more fully in section H below, other factors also demonstrate that imports from China will rise once quotas are removed. These include the combination of China's productive capacity in textiles and apparel, its substantial investment in its textile and apparel sectors, its use of unfair trade practices, its performance in

other apparel categories and in other similar markets, and a virtually unanimous chorus of opinions by experts in the textile and apparel field.

As a result, there can be no serious question as to whether China will increase its exports of the subject product as well as other textile products to the United States once import quotas are lifted. The general surge of textile and apparel imports from China has already begun. OTEXA's report on textile and apparel imports for the January-August 2004 time period already reads like a competition between China and the rest of the world - with China taking almost every category.

China is --

- the number one shipper of textiles and apparel to the United States
- the number one shipper of textiles to the United States
- the number one shipper of apparel to the United States
- the number one shipper of other miscellaneous textile and apparel products to the United States.

A comparison of growth between imports from the entire world and imports from China is also compelling:

Increase in Imports: Jan-Aug 2004

<u>Article</u>	<u>From World</u>	<u>From China</u>
Textiles and apparel	10.80%	47.37%
Apparel	1.27%	26.71%
Textiles	18.67%	55.51%
Made-ups and home furnishings	27.57%	58.86%

When the OTEXA report lists the countries accounting for 80 percent of the growth in imports to the United States, China is the only country listed for all textiles and apparel (81 percent of total growth), for apparel (244 percent of the growth), and for other miscellaneous imports (93 percent of the growth) and is one of three countries listed for textiles (but claims 72 percent of the growth).

* Group III in 2004 includes categories: 201, 220, 224-V, 224-O, 225, 227, 369-O, 400, 414, 469, 603, 604-O, 618-620, 624-629 as a group.

** Due to the removal of certain products from Group III on January 1, 2002, the overall group limit was adjusted downward.

Source: 1999-2003 data from China Performance Reports available at <http://otexa.ita.doc.gov/chinaperform.htm>. YTD 2004 data from U.S. Customs and Border Protection Textile Status Report for China accessed at <http://www.customs.gov/quotas/files/cntxtrpt.htm>.

F. PRODUCTION DATA

U.S. production of the subject products has declined dramatically since 2001, and in 2002 was 65 percent below the previous year. In raw numbers, U.S. production fell by 2.2 billion square meters in just one year. The latest data also shows a continuation of that trend in the first three quarters of 2003, with year-to-date production down.

Table 4 - U.S. Production, Category 620

U.S. Production		Category 620 Quantity (Thousand SME)
5 Full Years	1998	4,142,014
	1999	4,697,148
	2000	4,209,575
	2001	3,372,886
	2002	1,181,187
YTD January - Sept.	YTD '02	889,359
	YTD '03	806,339
Year Ending	Sept. 02	1,136,784
	Sept. 03	1,098,227

U.S. production has suffered an enormous drop in recent years as the market for category 620 fabrics has contracted. For the period 1998 through 2002 (last full five years of data), U.S. production plummeted 71.5 percent. Since 1999 there has been a full 75 percent drop in U.S. production, and declines continue in the most recent year-to-date period, January through September 2003, as U.S. production experienced a 9 percent drop. Imports over this same period have not undergone the same type of dramatic declines. Since 1999, imports from all sources have decreased by just over 31 percent. As noted earlier, on a year-to-date basis, imports from all sources are actually growing by 10 percent. Consequently, there has been a sharp increase in imports relative to domestic production recently.

G. MARKET SHARE DATA

For the reasons noted above, the U.S. industry's share of the U.S. market of the subject products declined sharply in 2002 to 80.1 percent from 92.2 percent in 2001. Likewise, import market share increased from 7.8 percent to 19.9 percent over that same period. China's share of the U.S. market has remained relatively stable, owing to the existence of import quotas on the subject products.

With the recent trend of a sizable contraction in the overall U.S. market for the fabrics covered under category 620, China's threat to the U.S. industry is greatly increased. In an overall declining market, increasing imports from a specific supplier will have an exaggerated impact. As noted earlier, China is already surging into the U.S. market with a 46% increase in their imports since the beginning of this year. For the last year ending period (8/04), China's exports to the U.S. have grown by nearly 34 percent. In addition, imports from all sources in category

620 have grown on a year-to-date basis by 10 percent. These import trends contradict the overall contraction in the U.S. market and the decreasing production environment for U.S. manufacturers of 620 fabrics.

H. THE THREAT OF INCREASED IMPORTS FROM CHINA

There is strong and compelling evidence from many sources that imports of the subject products from China will increase when quotas are removed on January 1.

1. Growth in textile and apparel production capacity in China has occurred at an astounding rate, demonstrating the country's commitment to accelerated market share in textiles and apparel worldwide;
2. China has moved quickly to dominate the market in virtually all categories removed from quota control;
3. China has engaged in significant price cutting in order to rapidly accumulate orders in every category removed from quota in the U.S. market;

4. There is a general agreement by academicians, analysts and international institutions that China will dominate world trade in textiles and apparel, and particularly the U.S. market;
5. There have been consistent statements by executives from major suppliers, retailers and sourcing agents that China will dominate world trade in textiles and apparel, and particularly the U.S. market;
6. In other developed markets similar to the United States where quotas were removed, China moved quickly to dominate them; and
7. China continues to engage in a variety of unfair trade practices, including currency manipulation, which allow Chinese textile and apparel manufacturers to undercut U.S. and other competitors' prices.

1. Growth in China's Productive Capacity for Textiles and Apparel

China's capacity to produce the subject products and other textile products has increased dramatically in recent years⁷ and this increase will fuel growth in U.S. imports from China. China has been aggressively buying textile and apparel machinery for the past four years, in some cases consuming up to two-thirds of world production of textile machinery (i.e. broadwoven fabric looms). According to *China Daily*, Chinese purchases of textile machinery totaled nearly \$12 billion between 2000 and June 2003. Chinese government statistics reveal that China has invested \$22.2 billion in its textile and apparel sectors since 2001.

Table 7 - Textile machinery purchases in China

Major Textile Machinery Imports		
Item	2002 (in units)	% Change from 2001
Automatic Spooling	1,186	23.54%
Rapier Looms	5,873	67.61%
Water-jet Looms	9,589	71.82%
Air-Jet Looms	14,963	108.31%
Washing, Bleaching, Dyeing Machines	4,582	51.82%

Source: China National Textile Industry Council, 2002/2003 Report on China Textile Industry Development

⁷ "In 2001, China imported the advanced textile machinery in value of US\$2.5 billion, 31.4% up as against 2000. And the textile machinery imports for the first half of 2002 has already reached US\$1.3 billion, a 5.82% up against the same period of last year; 2001 saw an import of 5.9526 million tons of dyestuffs and textile chemicals, 22.75% up against 2000, and from 1-6 months this year, this import arrived at 3.69 million tons, 37.71% growth compared with the same period of last year." Statement of Mr. Du Yuzhou, President of China National Textile Industry Council (2002), as reported at http://www.cntextile.com/cntex/english2/2002_du.htm.

Also see, "The country's import textile machinery reached 4,372,090,000 US dollars in 2003, an increase of 24.26 percent over the previous year. Of this, import in December was 452.04 million US dollars, rising 27.6 percent over the previous month. The biggest importers of textile machinery were Zhejiang Province to reach 1,167,210,000 US dollars and Jiangsu Province to 1,118,070,000. The two accounted for 48.67 percent of the total, rising 3.6 percentage points over the previous year. ... Looms and knitting machinery took up the biggest part of the import, followed by spinning and dyeing and printing machinery. Import of looms was 921.40 million US dollars; knitting machine, 834.85 million US dollars; spinning machinery, 732.72 million US dollars, and dyeing and printing machine, 745.38 million US dollars. Import value of knitting machinery jumped 34.72 percent and the price increased 52.54 percent." *China's fast development of textile industry has spurred a fast growth of imports of textile machinery*, Xinhua Economic News Service, April 7, 2004.

Table 8 - China Investment in Textile Industry

China: Cumulative Fixed Asset Investment in the Textile Industry (Bil US\$)		
Cumulative Annual Total		
	Amount	% Change
1999	1.64318	-
2000	2.48413	51.2%
2001	3.54893	42.9%
2002	4.34511	22.4%
2003	7.24306	66.7%
Jan-Aug 2004	7.06277	72.6%

Note: Excluding investment by rural collectives and urban and rural individuals.

Sources: State Development Planning Commission, National Bureau of Statistics and SIC.

As noted by the International Trade Commission, the "size and performance of the world textile industry can be measured in terms of mill consumption of fibers, installed spinning and weaving capacity, and investment in new production equipment.... there has been a shift of world yarn spinning and fabric weaving capacity from developed countries to developing countries in the past two decades. Most of the increase in production capacity has occurred in Asia, particularly China, which along with India has the largest number of spindles and weaving machines in the world. Growth of spinning and weaving capacity in China and India has been facilitated by strong demand for their exports of downstream textile goods."⁸

The ITC report goes on to note that "mill fiber consumption in China far exceeded that of any other developing country.... China alone accounted for 29 percent (34.7 billion pounds) of the world total in 2001; its mill consumption rose three times as fast as that for the world during 1997 through 2001 (39 percent versus 13 percent)."⁹

The subject products are produced from man-made fibers such as polyester. Man-made fiber production capacity grew by 18 percent in China during the 1990s and has continued on a dramatic pace since 2000. China's share of world polyester fiber capacity has jumped from 26 percent in 2000 to 44 percent in 2004. The following tables chart China's growth in both mill consumption of manufactured fiber since 1998 and polyester fiber capacity in recent years with an estimate for 2005.

According to a recent report in the China Textile Leader¹⁰, the production of man-made fibers in China continues to rise at a torrid pace. In an article reporting chemical fiber production in China for the January - July period, it reported:

The chemical fiber production in China in the January-July period of 2004 totaled 7.97 million tons, up 27.02% over the same period of last year, according to the National Bureau of Statistics. The production of ... synthetic fibers 7.36 million tons, up 28.01%.

According to the customs, China imported about 1.04 million tons of chemical fibers, an increase of 90,100 tons by 9.49% compared with the same period of last year. The import of ... synthetic fibers 997,300 tons, an increase of 74,500 tons by 8.07% compared with same period of last year. The production of major synthetic fibers is respectively as follows: polyester fiber about 6.34 million tons, up 30.72% compared with same period of last year, polyester chips 4.77 million tons, up 17.86%, polypropylene fiber 168,500 tons, up 11.07%, polyvinyl alcohol fiber 21,739 tons, up 8.33%, polyamide fiber 378,800 tons, up 20.98% and acrylic fiber 386,800 tons, up 8.99%.

Not only is China a significant producer of man-made fiber, but also China has imported an ever-increasing amount of man-made fiber from other sources to feed its growing man-made textile

¹⁰ China Textile Leader, 10F China Textile Mansion 6 South Dongzhimen St., 100027 Beijing China, Tel: 86-10-64160494, Fax: 86-10-64159702, E-mail: info@texleader.com.cn.

and apparel operations, having increased polyester imports from 832,000 tons in 2000 to 992,000 tons in 2003.¹¹

According to the Global Trade Atlas Database¹², China has been rapidly expanding its exports of synthetic filament fabric over the past five years. Chinese exports of category 620 have increased by 394 percent since 1998, rising from approximately 838 million meters to over 4 billion meters in 2003.

Chart 3 – China Synthetic Filament Fabric Exports to the World

Source: Global Trade Atlas Database

In comparison, entire U.S. production of synthetic filament fabric totaled 1 billion square meters in the year ending September 2003, the most recent 12-month period available. These numbers make it clear that simply retargeting a small portion of China’s overall fabric production, or its synthetic filament fabric exports, could have a substantial impact on U.S. synthetic filament fabric producers.

The synthetic filament fabric export figures demonstrate that China is both competing heavily in world synthetic fabric export markets as well as supplying increasing amounts of fabric for its rapidly increasing domestic apparel production.

In its 2004 Report to Congress, the U.S.-China Economic and Security Review Commission stated:

China is continuing to attract massive levels of foreign direct investment (FDI), including \$57 billion in 2003. Its policies to attract FDI have been supplemented by industrial policies aimed at developing national productive capacity in selected “pillar” industries. These policies support Chinese corporations through a wide range of measures that include tariffs, limitations on access to domestic marketing channels, requirements for

¹² Global Trade Atlas is a database compiled by Global Trade Information Services Inc. Their web address is www.gtis.com, and their corporate office is located at 2218 Devine St, Columbia, SC 29205. It is important to note that one major exporter, Pakistan, is not included in the database.

technology transfer, government selection of partners for major international joint ventures, preferential loans from state banks, subsidized credit, privileged access to listings on national and international stock markets, discriminatory tax relief, privileged access to land, and direct support for R&D from the government budget. Such policies give Chinese industry an unfair competitive advantage, thereby contributing to erosion of the U.S. manufacturing base. Many of these policies are not permitted under World Trade Organization (WTO) and U.S. trade rules.¹³

China has now overtaken the United States as the world's largest recipient of foreign direct investment.

News reports consistently cite increases in the buildup of production capacity in China.¹⁴

- Chinese government statistics showed that last year there were 3,784 textile plants under construction in China, with \$180 billion in outstanding planned investment and \$78 billion poured into new production in 2003.¹⁵
- The Investment Department of the National Bureau of Statistics reported that 4,584 textile “projects” were underway in 2003, with a total planned investment of \$25 billion.¹⁶
- Total investment in the textile sector is up significantly in China. It is reported that there are 90 million people directly or indirectly employed in the Chinese textile industry.¹⁷

Petitioners attempted to discover the names and addresses of manufacturers of synthetic filament fabric in China. A list of those manufacturers reasonably believed by Petitioners to produce the subject products is attached as Exhibit 3. Petitioners do not assert that this list is complete. Petitioners attempted, but could not determine what manufacturers were producing the subject products primarily for export to the United States, as opposed to production for domestic consumption or for export to other countries.

2. China Dominates the Market in Textile Product Categories Previously Removed From Quotas

China consistently dominates trade in those textile product categories where quotas have been removed. According to U.S. Department of Commerce data, in the 44 textile and apparel categories where quotas were removed in 2002¹⁸, China increased its share of the U.S. import market from 7 percent in 2001 to 39 percent as of August 2004. Within the first twelve months

¹⁸ Results of a tracking study by the National Council of Textile Organizations (NCTO) on the impact of China on the apparel categories released from quota control in 2002.

of quota removal, China more than doubled its import market share to 18 percent and then doubled that share again within the next 20 months. China accounted for 86 percent of the growth of total imports in these decontrolled categories, with imports from China increasing by 3.9 billion square meters and imports from all other sources increasing by 655 million square meters.

In textile specific categories, China's domination of U.S. textile imports followed a similar track. China's share increased from 7 percent in 2001 to 33 percent by August 2004. Again, China more than doubled its import share to 15 percent within the first twelve months and then doubled it again over the next twenty months. China accounted for 73 percent of the total growth of 3.8 billion SMEs in imports in these categories.¹⁹

In categories 222 and 622, two fabric categories that were removed from group quota coverage in 2002, China's share of the U.S. imports grew in similar fashion. In category 222, knit fabric, imports from China exploded from an import market share of 0.03 percent to an 8 percent market for the year ending August 2004. In category 622, glass fiber fabric, China went from a 1.3 percent share of the U.S. import market to a 15 percent share over the same time period.

In apparel categories, China increased its market share from 10 percent to 72 percent as of year-to-date June 2004. Imports from China in these product categories grew by 1,009 percent or 1.05 billion square meters during the two and a half year period after quotas were removed.

Imports from the rest of the world fell from a 90 percent market share to 28 percent, and shipments by the rest of the world fell by 370 million square meters.

3. China Engages in Significant Price Cutting in Categories Removed From Quota

China has engaged in significant price reductions in both its current exports of synthetic filament fabric around the world and in textile and apparel categories removed from quota control. These examples indicate a desire to rapidly accumulate market share.

China already has demonstrated the ability to undercut the worldwide market in synthetic filament fabric. According to the Global Trade Atlas Database, China's average price of exported synthetic filament fabric has dropped by 32 percent over the past eight years, with China dropping its price from \$1.11/m in 1995 to \$0.75/m in 2003.²⁰ It is impossible to extract an average world price from Global Trade Atlas data because countries report their exports in different units; however, the average price of world exports of synthetic filament fabric to the U.S. was \$0.95/m² in 2003. The U.S. export price was \$2.28/m² in 2003.

As a result, China is now the largest exporter of synthetic filament fabric of the countries included in the Global Trade Atlas database. China exported nearly 1.5 times as much synthetic filament fabric as its next largest competitor (Taiwan) in 2003.

In addition, experience with textile and apparel products previously under quota control show a strong likelihood that China will cut prices. U.S. Commerce Department data show that, with respect to the categories where quotas have been lifted, China dropped its prices by an average of

¹⁹ Textile categories: 600, 606, 607, 800, 222, 223, 229, 621, 810, 464, 465, 665, 670, 870, 871, 889.

²⁰ Note that China reports exports in meters rather than square meters.

53 percent for all textile and apparel products, with average prices falling from \$2.73/square meter in 2001 (with quotas still in place) to \$1.32/square meter for year-to-date August 2004.²¹

In fabric categories removed from quota control, Chinese prices dropped by an average of 69 percent, falling from \$1.59/square meter in 2001 to \$0.50/square meter YTD August 2004. Every fabric category removed from quota control experienced sharp price declines.

Likewise in apparel categories removed from quota control, Chinese prices fell an average of 54 percent, with average prices declining from \$6.23/square meter in 2001 (with quotas still in place) to \$2.87/square meter for YTD August 2004.²²

Petitioners submit that, absent implementation of timely threat-based safeguard action, similar price declines can be expected to occur for imports of the subject products when remaining quotas are removed on January 1, 2005.

4. Academicians, Analysts and International Institutions Agree that China Will Dominate World and U.S. Trade in Textiles and Apparel

The anticipated growth in imports from China is supported by a wide array of economic literature and independent studies. Virtually every study produced by private consulting groups, governments and international agencies has concluded that once quotas are removed China will rapidly increase its share of world trade in textiles and apparel, and particularly the U.S. market. These studies include:

Goldman Sachs: "China's Textile/Apparel Manufacturing: The big bang in 2005," June 2004.

Goldman Sachs concludes that "without quotas, China's exports are set to expand immediately" and that "China has the ability to grow its textile and apparel exports rapidly once trade barriers are removed."

The Sachs study cites China's domination of similar sectors "such as footwear or toys or sporting goods – equally labor-intensive and low-value added" with Chinese market shares of 66 and 67 percent as an example of the kind of market control China can assert. The study also cites the development of a "complete food chain in textile and apparel manufacturing" in China and the likelihood that "once quotas are removed, wholesalers and retailers are likely to immediately consolidate their orders."

The study concludes that "we expect a rapid increase in textile and apparel manufacturing" from China and warns that "China is likely to have rapid market dominance in certain products, and exert tremendous price pressure and destructive power on other exporters as well as domestic manufacturers in the importing countries once quotas are removed."

The study also concludes that safeguard measures *based on market disruption* are not likely to be successful because of China's ability to rapidly capture market share. Sachs says that such safeguards may be approved but because "there is likely a lead time for

²¹ Results of a tracking study by the National Council of Textile Organizations (NCTO) on the impact of China on the apparel categories released from quota control in 2002.

²² Results of a tracking study by the National Council of Textile Organizations (NCTO) on the impact of China on the apparel categories released from quota control in 2002.

China's exports to prove to be market disruptive, and by which time, China's exports in these product may already be very substantial.

World Trade Organization, Hilegunn Nordds: "The Global Textile and Clothing Industry post the Agreement on Textiles and Clothing," 2004

Nordds concludes "the predicted changes (from quota elimination) are a substantial increase in market shares for China and India, while previously unrestricted (no quota or non-binding quotas) countries will lose market share as well as *local producers in North America and the European Union.*" [Emphasis supplied]

Using a GTAP general equilibrium model, Nordds predicts that China (including Hong Kong) "triples its share" and takes a 56 percent share of the U.S. import market for apparel while the Mexico and the rest of Latin American loses 70 percent, with the Mexican share falling to 3 percent (from 10 percent) and the South and Central American share falling to 5 percent (from 16 percent).

Nordds also notes the consensus view among researchers: "Most analyses of the phasing out of impact of the ATC conclude that China and India will come to dominate world trade in textiles and clothing, with post-ATC share of China alone estimated at more than 50 percent or more. This study replicates those predictions."

United States International Trade Commission, publication 3671: "Assessment of the Competitiveness of Certain Foreign Suppliers to the U.S. Market"

The United States International Trade Commission study of the impact of the quota phase-out concluded that "China is expected to become the 'supplier of choice' for most importers because of its large ability to make almost any type of textile and apparel product at any quality at a competitive price." The Commission cited importers who said "there is no garment that they would not make in China."

The Commission also concluded a primary reason that importers were unlikely to concentrate sourcing entirely in China was "because of uncertainty over the use by the United States of the textile-specific safeguard provision."

The Commission reviewed a number of recent studies concerning the quota phase-out, all of which predicted a large increase in Asian market share (China share was not generally extrapolated). One study by Avisse and Fouquin (2001) extrapolates China's apparel exports, predicting that it would jump 87 percent once quotas are removed.

The Commission noted many reasons for China's predicted dominant position, including that "China is the world's largest producer and exporter of textiles and apparel and it has invested more in spinning and weaving equipment than any other country during the last five years. Moreover, China's huge supply of inexpensive labor and skilled sewers, coupled with access to indigenous raw materials, has enabled China's textile and apparel industries to remain highly price competitive and attract foreign direct investment in facilities and technologies."

5. Major Suppliers, Retailers and Sourcing Agents Indicate China Will Dominate

World and U.S. Trade in Textiles

The companies that supply the U.S. consumer with textile and apparel merchandise believe imports from China into the United States will dramatically increase. Numerous press statements from major U.S. importers and retailers confirm that executives who make the sourcing decisions plan to quickly move sourcing to China.

Of these statements, perhaps most significant were those that came from a confidential survey taken earlier this year of top U.S. executives for major importing and retailing firms who predicted that China would dominate trade in apparel once quotas are removed. The poll, which was conducted in January at the Cotton Sourcing Summit in Miami, asked what percentage of the U.S. apparel market China would take once quotas were removed. Eighty-seven percent of the respondents said China's share would exceed 50 percent and half of those predicted that China would gain between 75 and 90 percent.

Regarding major suppliers, 96 textile and apparel trade associations from 54 countries around the world have joined together in the Global Alliance for Fair Trade in Textiles (GAFTT) to raise concerns about China's ability to disrupt markets around the world once quotas are lifted. Citing member concerns, GAFTT recently stated: "Since China joined the WTO at the end of 2001, it has engaged in a premeditated and systematic effort to monopolize world trade in textiles and clothing by undercutting free market prices through a complex scheme of industrial subsidization and currency manipulation" and that "China has used and continues to use (the following) unfair trade practices to artificially undercut the prices of every other country in the world."

In a recent Women's Wear Daily article, Robert Zane, senior vice president of sourcing, distribution and logistics for Liz Claiborne, described why China would move to quickly flood the U.S. market. Zane said the likelihood of safeguards will probably prompt a flood of Chinese goods into the U.S. market starting in January.

"We should not underestimate what many Chinese factories will do at the end of this year to prepare to ship early next year," he told the group of mill, importer and apparel manufacturer executives. "They will be looking for incentives to offer their buyers."

In a later interview, Zane said price cuts of as much as 20 percent might be reasonably expected in the opening months of the year. He added that for a brief period companies might resort to selling goods at or below cost to drive volume.

Chinese exporters will be looking to quickly fill their order books for a simple tactical reason, Zane said. The U.S. is allowed to impose one-year safeguard quotas that would limit Chinese exports in any given category to no more than 7.5 percent higher than the volume of goods imported over the past year. Even a few months of sharply higher imports could lead to significantly higher safeguard quotas.

According to several sources, including Zane, Chinese officials have indicated they will not negotiate safeguard quotas until the U.S. can show evidence that their exports are growing rapidly enough to meet the standard of market disruption called for in the bilateral agreement. That suggests that if safeguard quotas were imposed after a few months of enormous export growth, those quotas would be higher than they would have

been if they were imposed in January, when they would have been based on a restricted level of trade.

"They're going to assume there will be a quota number and the new quota will be based on actual business," said Zane.

Another speaker suggested that idea will also motivate Chinese negotiators to delay and prolong talks.

"What they may try to do is extend the period of time under which negotiations take place," said Martin Trust, president of Salem, N.H.-based Brandot International Ltd., a sourcing company with investments in countries including Sri Lanka and Madagascar.

"They'll look to buy time. The longer they can stretch it out, the better the performance is going to be and the higher amount of quota they can get."

Other leading retail, importing and sourcing executives have regularly expressed their own expectations regarding how China will quickly move to dominate the US market:

South China Morning Post 6/11/04 – “A lot of importers in the U.S. and Europe are placing huge orders for basic items like jeans and polo shirts, in anticipation of the lifting of quotas. These importers want to grab market share. These are not normal purchases but speculative. In the end they may depress prices and prompt dumping.” – Hong Kong Textile Council vice-chairman Willy Lin Sun-mo

Women's Wear Daily 3/3/04 – 300 importers and retailers who participated in a survey at the Cotton Sourcing Summit in Miami in February 2004 were asked to predict what percentage of U.S. market share China would capture after quotas expire. 43 percent of the respondents thought China would capture 50 to 75 percent market share while another 44 percent thought China share would total 75 to 90 percent.

Bloomberg News 8/4/04 – Bruce Rockowitz, an executive director at Hong Kong-based Li & Fung, which sources clothing worldwide for retailers including American Eagle Outfitters and Abercrombie and Fitch, estimates that 70 to 80 percent of all clothing production will move to China after January 1. Mr Rockowitz said that the Li & Fung has seen a sharp rise in U.S. orders for Chinese clothing. “The surge probably reflects fears that the U.S. will impose anti-surge quotas on Chinese clothing,” stated Rockowitz.

Financial Times 7/20/04 – Bob Zane, head of global sourcing and manufacturing for Liz Claiborne, told the Financial Times that he expects Liz Claiborne to halve the number of countries from which it sources clothes in the next three to four years. In the process, China's share of company direct overseas sourcing will go from about 15 percent to about half, a ratio that Zane expects other big U.S. purchasers will match. He sees China becoming “the factory of the world.”

Textile Asia, June 2004 - Alex To Man-yau, head of Chinese operations for Hong Kong trade facilitator, Trade Easy, said: “We are seeing a lot of inquiries and orders for Chinese garments from the U.S., Europe and Canada.” Mr. To said that the average value of orders placed through his firm for Chinese garments by U.S., Canadian and European buyers has increased fivefold this year over last year.”

Textile Asia, June 2004 - Mr. Neeraj Sawhney, a director for the Hong Kong textile trade, Topnet International, said: "There are many more queries for orders and shipments of Chinese garments from the U.S. for 2005 and beyond."

Textile Asia, July 2004 - Steven Feninger, Chief Executive of Linmark Group, a trading firm, said: "Garment orders are rushing to the Mainland from Southeast Asia and Central America in anticipation of the lifting of global textile quotas next January. The scale of the move to China is going to affect national economies." Linmark notes that "once textile quotas are eliminated under World Trade Organization rules, buyers are expected to shift en masse to cheaper Chinese goods." Linmark estimated "that the proportion of its sourcing from Mainland, Hong Kong and Taiwan will rise to 70 percent in two years."

China Daily, Sept. 8, 2004 - Zhao Hanyu, Chairman of Tianlong Holding, China's leading textile manufacturer and exporters: "The costs of quotas have made the price of many Chinese textile products close to those of some quota-free Southeast Asian countries, although China's manufacturing costs are much lower. After the quota is lifted, the cost advantage of Chinese products will be realized and its exports to the U.S. market should increase significantly."

6. In Markets Similar to the U.S., China Quickly Dominated Categories Removed From Quota

It is expected that imports from China into the United States will increase on January 1, 2005, because textile and apparel imports from China quickly took a dominant position upon the lifting of quotas in other markets similar to the United States. In her WTO study, Nordds confirmed this by stating, "a high and rapidly increasing market share is observed for China following its accession to the WTO in 2001 in Australia, Japan and South Africa." In 2001, Chinese share of the apparel market in South Africa was 56 percent, Japan was 78 percent and Australia was 70 percent (source: Comtrade database). WTO figures also show that by 2003 China had achieved an 80 percent share of the Japanese apparel market.

As cited by the U.S. International Trade Commission report, "China has proven its ability to compete in other developed country markets, particularly Australia and Japan, for which it accounted for 69 percent (2002) and 77 percent (2001) of their apparel import markets, respectively." Australia is significant because it represents a developed market with similar consumption patterns and preferences as the United States but for whom quotas were removed ten years ago.

The ITMF Country Statements Publication²³ for Australia stated: "China has maintained its dominance and has demonstrated sustained growth and increasing share in the last year. Over the past five years, imports from China in value terms have roughly doubled and now account for 70 percent of clothing imports. As average fob prices from China are low relative to other countries, in quantitative terms, this share is significantly higher."

²³ For its annual conference, the International Textile Manufacturers Federation (ITMF) publishes a review of the current state of the textile industry in each member country. Included are data relating to the general economic situation, textile manufacturing capacities, activity levels and trade in textiles. ITMF is an international association for the world's textile industries.

7. China Engages in a Variety Of Unfair Trade Practices, Including Currency Manipulation

China's persistent use of unfair trade practices will provide additional fuel to its export surge. In a major review last June by the U.S.-China Economic and Security Review Commission of China's industrial policies²⁴, Commissioners cited a wide range of unfair and mercantilist trade practices. In summation, the Commissioners noted that major areas of concern were "China's manipulation of its currency, continued provision of direct and indirect subsidies to Chinese producers, use of unjustified technical and safety standards to exclude foreign products and poor enforcement of intellectual property rights."

Regarding the textile and apparel sectors, the Commission noted that the Chinese government had selected this sector as one of its "pillar industries." According to the Commission, the Chinese government supports these pillar industries "through a wide range of measures that include tariffs, limitations on access to domestic marketing channels, requirements for technology transfer, government selection of partners for major international joint ventures, preferential loans from state banks, subsidized credit, privileged access to listings on national and international stock markets, tax relief, privileged access to land, and direct support from R&D from the government budget."

Of particular note, China's tax rebates of 13 percent for textile and apparel products exported to the United States, China's government subsidization of state-owned textile and apparel enterprises and the proliferation of "free credit" for both these enterprises and private enterprises have created a "playing field" in textiles and apparel where China can choose to underprice its competitors, including U.S. producers, virtually at will. Indeed with a non-performing loan rate at near fifty percent by its state banks and an apparent enormous increase in apparel capacity, Chinese manufacturers are poised to meet and break price points set by its free market competitors in the U.S. and around the world.

China's manipulation of its currency over the past ten years by pegging the yuan to the U.S. dollar has had a particularly disruptive impact on world trade of textiles and apparel, and this disruption has been even more pronounced since 1999. The undervaluation of China's currency has enabled China to sell the subject products at prices that are lower than fair value and enabled it to undercut prices for the products in many markets around the world. Further, the continued devaluation of the yuan ensures that China retains significant price flexibility once quotas are lifted on January 1, 2005. It is clear that China is positioned to repeat the type and degree of price undercutting it has practiced with respect to other products and in other markets.

According to the Federal Reserve, over the past five years, the yuan has been valued at an average of 8.2775 yuan to the U.S. dollar, with only a very narrow fluctuation range of plus or minus 0.1 percent (essentially equal to 1/100th of one U.S. cent). In the last year, the range has narrowed even further to plus or minus 0.01 percent (equal to 1/1000th of one U.S. cent). Such microscopic variations in the yuan vis-à-vis the U.S. dollar clearly constitute a fixed-peg currency system, and as a consequence it is the consensus view among economists, academicians and policy makers that the yuan has been artificially undervalued by a significant margin, possibly as much as 40 percent.

²⁴ *Ibid.*

Moreover, this fixed-peg currency system, when combined with the absence of quantitative restraints, has given China such an unbeatable and unfair competitive advantage that it has enabled China to literally manipulate and seize control of textile and apparel markets worldwide.

China's currency manipulation, which has been acknowledged by the Administration as harmful to U.S. manufacturing, violates a number of international agreements and legal obligations, including those which prohibit export subsidies, and it circumvents the basic goal of the World Trade Organization -- to promote the orderly development of world trade. It also violates the International Monetary Fund's Articles of Agreement, which states that each IMF member shall "avoid manipulating exchange rates or the international monetary system in order to prevent effective balance of payments adjustment or to gain an unfair competitive advantage over other members."²⁵

I. ADDITIONAL INFORMATION

1. Economic Condition of U.S. Textile Industries

As the following table illustrates, U.S. employment in fabric mills has declined significantly since 1999, falling from 211.2 thousand in January 1999 to 116.0 thousand in June of 2004.

Quantity in thousands of workers

p : preliminary - [SOURCE: U.S. Dept. of Labor Bureau of Labor Statistics]

Since the late 1990s, and despite spending over \$2 billion annually²⁶ in capital investments in an effort to modernize and increase productivity, the United States textile sector has experienced an unprecedented wave of plant closings and job losses. In the last six years, the U.S. has lost some 220,000 textile jobs, fully 33 percent of its entire workforce. The textile industry lost 50,000 jobs in 2003 alone, fully 10 percent of the workforce. These jobs paid an average of between \$11 and \$12 per hour, depending on the position.²⁷ (For apparel, the damage has been

²⁵ International Monetary Fund Articles of Agreement, Article IV, Section 1 (iii).

²⁶ Source: U.S. Census Bureau (industry record for capital expenditures was \$3.4 billion in 1997; because of industry contraction, capital expenditures had dropped to \$2.3 billion in 2001, the most recent year for which figures are available)

²⁷ Source: U.S. Bureau of Labor Statistics

even worse, as 347,000 jobs have been lost in the last six years, equal to 55 percent of that workforce.) Using a 50-year time frame, the 10 percent rate of decline in textiles employment in 2003 was second only to the 13 percent rate the industry suffered in 2001.²⁸

Chart 4 - Employment in U.S. Textiles

By virtually every measure, the textile industry’s fortunes continued to suffer in 2003 and did not rebound significantly in 2004, even as the rest of the economy was reported to be recovering. Textile mill shipments fell in 2003 by eight percent to \$39.8 billion and, while they have risen in 2004 by a small percentage, 3.5 percent over last year, in year-to-date figures through August, they are still 6 percent lower than the comparable period in 2002.²⁹ Textile corporate sales also declined in 2003 by three percent to \$47 billion, and while corporate sales are up somewhat in 2004, so far they are still barely three percent above the comparable period in 2002.³⁰

As imports have risen, the U.S. textile industry has experienced losses in employment and an increased number of plant closings. The charts below show job losses over the past five years in textiles nationally and in key textile producing states, as well as plant closing data:

A partial listing of textile plant closings can be found by visiting the following website:

<http://www.ncto.org/ustextiles/plantclosingsUSA.html>

This decline would have been far more pronounced had it not been for a successful transition into an increased outward processing trade. U.S. participation in outward processing trade has increased substantially over the last 10 years. Increased imports of the subject products from China seriously threaten the continuation of the outward processing trade.

Apparel Sector Declines Have Hurt the U.S. Fabric Sector

Declines in the production of U.S. apparel have a corresponding negative impact on the U.S. fabric sector – again an impact that would have been even more pronounced if not for the development of the outward processing component of the U.S. market.

U.S. apparel shipments have been consistently contracting in recent years. For 2003, the end of the year total of \$52.7 billion marked the sixth consecutive year in which shipments declined since they peaked at \$68.0 billion in 1997. Looking at the first six months of 2004, shipments were at \$28.3 billion, which was \$3.5 billion lower than they were in the first six months of 1999. While shipments rose during the second quarter, inventories continued to decline. At \$7 billion, inventories were \$2.6 billion lower than the comparable period in 1999.³¹

Employment in U.S. apparel manufacturing continued to fall in 2004. In August, employment in this industry stood at 282,300 workers, which was 21,400 or 7 percent below August 2003 levels. August 2004 employment levels are almost half of August 1999 levels, representing a 48.6 percent decrease in total U.S. apparel jobs.³²

U.S. apparel production is continuing to show the same negative trends evident in both the employment and shipment sectors of the industry. For 2003, apparel production was at \$23.9 billion or 11.8 percent below 2002 levels. Like the continuing decline in shipments and employment, production has declined year in and year out. Since reaching the \$41.6 billion mark in production in 1999, U.S. apparel production has dropped \$17.5 billion or 42.5 percent.³³

Apparel sales at the wholesale stage of the pipeline dropped considerably in 2003 with more than a 5.5 percent decline for the year from the previous year 2002. At \$84.7 billion, wholesale U.S. apparel sales are now at their lowest levels since 1998. End of period inventories are also on the decline and are 12.3 percent lower than 1998 levels.³⁴

The expected increase in imports of the subject products from China when quotas are lifted will exacerbate these negative trends.³⁵

J. ACTION AUTHORIZED UNDER THE AGREEMENT

Action by the United States under paragraph 11.242 of the Report of the Working Party is authorized, warranted and appropriate upon the belief of the United States that there is a threat of market disruption concerning the subject products and that imports from China of the subject products played a role in the threat of market disruption.

The WTO Report of the Working Party—Special Safeguard Authorization provides, in pertinent part, as follows:

"... The Member requesting consultations would provide China, at the time of the request, with a detailed factual statement of reasons and justifications for its request for consultations with current data which, in the view of the requesting Member, showed: (1) the existence or threat of market disruption; and (2) the role of products of Chinese origin in that disruption;..."

³¹ Source: U.S. Census Bureau

³² Source: U.S. Bureau of Labor Statistics

³³ Source: U.S. Census Bureau

³⁴ Source: U.S. Census Bureau

³⁵ Bruce Raynor, President of the Union of Needle, Trades, Industrial and Textile Employees predicts that an additional 500,000 domestic jobs will be lost if textile quotas, which were set when China entered the WTO, are lifted. In 2001, Wal-Mart brought its international buying division in-house and almost half of Wal-Mart's global sourcing employees work in China. Daniels, Alex, "Suppliers Move Jobs Overseas," Arkansas Democratic – Gazette, November 12, 2003.

K. REQUESTED ACTION

The Committee for the Implementation of Textile Agreements (CITA) is hereby requested to take all appropriate steps in order to avoid market disruption in 2005 with respect to imports from China of such products. Petitioners submit that such market disruption can only be avoided by the imposition of limitations on imports of the subject products from China according to the provisions of Section 11.242 of the Report of the Working Party and the guidelines issued by the Committee for the Implementation of Textile Agreements (68 F.R. 27788 (May 21, 2003)).

L. EXHIBITS

Exhibit 1 - Description of Petitioners

Exhibit 2 - HTSUS Codes of articles covered by the applicable category

Exhibit 3 - List of China manufacturers (as complete as possible)

EXHIBIT 1

Description of Petitioners

The American Manufacturing Trade Action Coalition (AMTAC) – AMTAC is a not-for-profit manufacturing trade association established for the purpose of preserving and creating American manufacturing jobs through the establishment of trade policy and other measures necessary for the U.S. manufacturing sector to stabilize and grow. Its members are involved in a wide variety of manufacturing, including textiles, throughout the United States. Its office is in Washington, DC. (www.amtacdc.org)

National Council of Textile Organizations (NCTO) – NCTO is a not-for-profit trade association established to represent the entire spectrum of the United States textile sector, from fibers to yarns to fabrics to finished products, as well as suppliers in the textile machinery, chemical and other such sectors which have a stake in the prosperity and survival of the U.S. textile sector. Its headquarters is in Washington, DC, and it also maintains an office in Gastonia, NC. (www.ncto.org)

The National Textile Association (NTA) – NTA is a not-for-profit trade association of companies who knit or weave fabrics in the United States, dye, print or otherwise finish fabrics in the United States, or supply fibers, yarns, or other supplies or services to the American textile industry. NTA's office is in Boston, MA. (www.nationaltextile.org)

UNITE HERE! – Formed by a merger in 2004 of UNITE (formerly the Union of Needletrades, Textiles and Industrial Employees) and HERE (Hotel Employees and Restaurant Employees International Union), the union UNITE HERE represents more than 440,000 active members and more than 400,000 retirees throughout North America. UNITE HERE's headquarters are in New York, NY. (www.unitehere.org)

UNITE HERE! has approximately 1,800 members who are engaged in the production of the subject products in the United States.
